A seasoned software engineer and multi-cloud practitioner with over a decade of experience building scalable, multi-layer systems across diverse industries. My background spans full-stack development, cloud infrastructure, and DevOps — with a strong emphasis on automation, maintainability, and team empowerment. I bring deep technical knowledge and strategic thinking to every engagement, consistently seeking opportunities to improve delivery, mentor engineers, and deliver solutions that last.

Work Experience

Senior Software Engineer — Feb. 2026 - Current

Quickbase — ***Sofia, Bulgaria***

Working within a multi-domain team across multiple repositories with a primary focus on backend development. Championing a culture of AI-assisted, automation-first engineering to maximize personal and team delivery.

- **AI-Augmented Delivery:** Deeply integrated Claude and GitHub Copilot into the day-to-day development workflow, leveraging AI assistance across implementation, code review, documentation, and problem-solving to consistently raise the quality and pace of output.
- **End-to-End Automation:** Driving smart tooling initiatives across the full engineering lifecycle — Jira, Slack, dev environments, test suites, and deployment pipelines with the goal of strongly reducing manual overhead.
- **Multi-Domain Ownership:** Contributing across multiple product domains and codebases, balancing breadth of coverage with depth of technical quality in a distributed, fast-moving environment.
- **Terminal-First Engineering:** Primarily operating through the terminal, with a strong emphasis on scripting, CLI tooling, and low-overhead workflows that keep development fast and reproducible.

Skills: *C#, .NET, React, TypeScript, Claude, GitHub Copilot, Jira Automation, Slack Tooling, CI/CD, Test Automation, Bash, Terminal Workflows*

Senior Cloud Automation Engineer — Sep. 2023 - Oct. 2025

VMware by Broadcom — ***Sofia, Bulgaria***

Acting as a client consultant and technical lead, I designed and implemented tailored cloud automation solutions for enterprise clients across VMware's product ecosystem. I supported pre-sales and architecture teams, translated complex requirements into actionable technical plans, and led development teams to deliver scalable, production-ready solutions.

- **Standardization Initiative:** Drove a 6-month proof-of-concept in a client-facing project, achieving **49/50 quality checks on first submission** with a full end-to-end testing suite. The effort became an organizational reference model for building standardized cloud services.
- **Performance Optimization:** Reduced Horizon application synchronization from **3+ hours to under 10 minutes for almost 95% performance improvement**, dramatically improving stability and client satisfaction.
- **Leadership & Delivery:** Directed development teams across multiple automation initiatives, ensuring consistency, quality, and timely delivery.
- **Architecture & Tooling:** Designed hybrid/multi-cloud automation workflows, contributed to reusable internal frameworks, and provided architectural guidance to enterprise clients.

Skills: *VMware Infrastructure (vRA, vRO, NSX, vCenter, Horizon), Python, PowerShell, Bash, TypeScript, JavaScript, Docker, Kubernetes, GitHub Actions, Cloud Automation, Consulting, Leadership*

Freelance Lead Software Engineer — Nov. 2020- Aug. 2023

Delivered high-impact software transformations for global clients across logistics, retail, and fintech sectors. Operated in senior and lead engineering roles, driving modernization efforts, cloud-native adoption, and architectural overhauls. Each engagement involved deep collaboration, rapid adaptation to legacy systems, and delivery of scalable, maintainable solutions.

- **Maersk /Denmark/ (Feb. 2022 – Aug. 2023):** Led the re-architecture of a legacy logistics platform into a modular, service-oriented system. Focused on infrastructure automation, data integrity tooling, and Azure Kubernetes deployments. Established a testing framework and technical documentation to support long-term maintainability. Onboarded the full development team to the new architecture. Fully modeled and error tracked previously loose data, **reducing internal application workflow configuration times by up to 5 times**.
- **adidas /Germany/ (Jul. 2021 – Jun. 2022):** Modernized an internal IT tool, migrating from .NET Framework to .NET 6. Delivered CI/CD pipelines, cloud integration, and full-stack improvements. Ensured seamless data and functionality migration with no downtime. Optimized data parsing workflows, reducing processing times from **15+ minutes to under 30 seconds for more than 95% performance improvement**. Lowered operation overhead by scaling down from 3 to 1 servers.
- **Dext /UK/ (Nov. 2020 – Jul. 2021):** Contributed to a pilot payments product in a fast-paced fintech environment. Implemented bank integrations and enhanced **analytics tracking to achieve 100% coverage of the user journey**, enabling richer product insights and decision-making.

Skills: *C#, ASP.NET (Framework, Core), .NET 6, Ruby on Rails, GraphQL, React, TypeScript, Docker, Kubernetes, Azure, AWS, CI/CD, Jenkins, Infrastructure as Code, Service-Oriented Architecture, Test Automation, Segment Analytics*

Technical Lead — Oct. 2013 - Oct. 2020

Amexis / Scalefocus — ***Plovdiv, Bulgaria***

Progressed from junior developer to technical lead over seven years, driving the evolution of a complex healthcare and education platform. Directed technical strategy, cloud migrations, and architectural redesigns while mentoring teams and delivering business-critical systems.

- **Enterprise Rebuild:** Defined architecture and infrastructure for a large-scale system migration to AWS, enabling scalability and resilience.
- **Performance Optimization:** Re-engineered a permissions system, reducing data records from **20M+ to <1M** and introducing front- and back-end caching. Improved authentication latency from **500–1000ms to <50ms (~95%+ improvement)** across every API call.
- **Team Leadership:** Mentored engineers, established coding and documentation standards, and onboarded new hires to ensure consistent delivery.
- **Innovation:** Piloted greenfield initiatives and proof-of-concept applications in lean teams, accelerating product experimentation.

Skills: *C#, ASP.NET (Framework, Core), Angular (JS, 2+), TypeScript, SQL, AWS, Software Architecture, Monolith and Microservices, Leadership, Agile Methodologies, Documentation, Performance Optimization, Unit Testing, Integration Testing, Cloud Infrastructure*

Education

Technical University of Sofia (2016-2019) - ***MSc in Computer Engineering*** - *distributed systems, computer vision, AI*
The University of Tokyo (2018) - ***Postgraduate Research Exchange*** - *computer vision, robotics, human-computer interaction*
Telerik Academy (2013-2014) - ***Software Engineering Program*** - *.NET, C#, JavaScript, web development, SOA*
Technical University of Sofia (2009-2014) - ***BSc in Computer Engineering*** - *programming, data structures, networks, architecture*
High School of Mathematics and Sciences PPMG Sliven (2004-2009) - *informatics, mathematics, and English.*

Certifications

VMware VSphere 7 Professional by LinkedIn	Sep. 2023
AWS Certified Solutions Architect - Associate by Amazon	Oct. 2019
MCSA Web Applications by Microsoft	Sep. 2016
MCSD App Builder by Microsoft	Sep. 2016
Exam 487: Developing Microsoft Azure and Web Services by Microsoft	Apr. 2014
Exam 486: Developing ASP.NET MVC Web Applications by Microsoft	Mar. 2014
Exam 480: Programming in HTML5 with JavaScript and CSS3 by Microsoft	Dec. 2013
Certificate in Advanced English by the University of Cambridge	Aug. 2009
